

Greno Woods

Forestry Operations 2019

This autumn will see further forestry works in Greno Woods. The removal of two stands of mature conifer will take place in line with our long-term woodland management plans. Additional thinning of adjacent conifer stands is also planned, to allow the remaining conifers more space to grow, and to increase tree regeneration across the area.

Planting of broadleaved tree shelterbelts will follow the felling works.

Did you know? The bottom two thirds of each tree felled is sold for timber, whilst the top third will be sold for biofuel.
